

# Exploratory Comparison of Toronto and New York

In this project I will gather and cluster neighborhood data for the cities of New York, USA and Toronto, Canada. The target for this Data Science project is to explore the two cities in terms of Foursquare data and see if there are any similarities between the two.

I will be using the Foursquare API to link businesses to neighborhoods to see things like the number of businesses, happiness of their customers, types of businesses by neighborhood and look for insights that can be acquired by analyzing this data.
